

Update

- Exercise 1 and Exercise 2 due at 18.00 today; every following exercise due the Monday after at 18.00
- Exercise 1:
 - 34 students registered (33 in UZH system)
 - 32 GitHub usernames received/guessed —> see 'markbot' message!
 - 26 Issues sent (Exercise 1 Part a)
 - 27 repos created (Exercise 1 Part b)
- Exercise 2:
 - 8 groups/repos started (Exercise 2 Part a)
 - 4 pull requests received (Exercise 2 Part b)
- Today at 11.00 (optional): managing data with renkulab.io

Linear Models and Empirical Bayes Methods for Assessing Differential Expression in Microarray Experiments*

Gordon K. Smyth
Walter and Eliza Hall Institute of Medical Research
Melbourne, Vic 3050, Australia

January 2004[†]

- seminal paper (cited >10,000 times)
- provides the foundation for a lot of (statistical) research in genomics
- we will digest this into a single lecture (14 Oct)

Journal club

Papers to be picked by 18.00 on 14th October; discuss it with Hubert and I.

Start: Oct 14 or Oct 21

Journal Club schedule to be finalized by 21st October

Given the number of students, groups of 2-3.

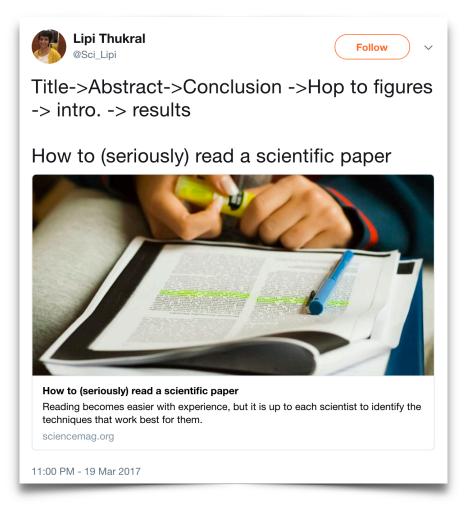

Use the #journal-clubs channel (e.g., to find a group member). I have put a link to several suggestions there.

Sign up by pull request (give a link to the paper, give initials of group members)

Date	Lecturer	Topic	Exercise	JC1	JC2
16.09.2019	Mark + Hubert	admin; mol. bio. basics	R markdown; git(hub)		
23.09.2019	Mark	interactive technology/statistics session	group exercise: technology pull request		
30.09.2019	Hubert	NGS intro; exploratory data analysis	EDA in R		
07.10.2019	Hubert	mapping	Rsubread		
14.10.2019	Mark	limma + friends	linear model simulation + design matrices		
21.10.2019	Hubert	RNA-seq quantification	RSEM		
28.10.2019	Kathi	hands-on session #1: RNA-seq	FASTQC/Salmon/etc.	X	X
04.11.2019	Mark	edgeR+friends 1	basic edgeR/voom		
11.11.2019	Mark	edgeR+friends 2	GLM/DEXSeq		
18.11.2019	Hubert	single-cell 1: preprocessing, dim. reduction, clustering	scRNA exercise 1		
25.11.2019	Helena	hands-on session #2: cytometry	cytof null comparison	X	X
02.12.2019	Mark	single-cell 2: cell type definition, differential state	scRNA exercise 2		
09.12.2019	Pierre- Luc	hands-on session #3: single-cell RNA-seq	full scRNA-seq pipeline	X	X
16.12.2019	Mark	loose ends: HMM, EM, robustness	segmentation, peak finding

How to read a scientific paper

https://github.com/jtleek/readingpapers

How much should you read?

Academic papers come out all the time. Thousands are published every year, including hundreds in any given specific area. Unless you devote yourself full time to reading academic papers you won't be able to keep up with them all. I believe in the idea that you should read papers that you find interesting. Science is awesome and you shouldn't waste your time on the boring parts if you can avoid it.

In general there are two main ways to find papers that I like. The way I used to do it was set up an aggregator with the RSS feeds from journals that I like, then I use the following (approximate) rates of reading parts of papers.

- 100% read the title
- 20-50% read the abstract
- 5-10% look at the figures/captions
- 1-3% read the whole paper

The new way that I do it is follow bioRxiv and a bunch of other people who have similar interests on Twitter. I use the above percentages for papers tweeted from aggregators and if I see a paper tweeted by 2-3 people I trust I usually end up reading that paper.
